Complete Dentures: Overcoming Common Problems
Mastering Edentulous Impressions and Lab Communication

This course will discuss various problems commonly associated with edentulous patients and methods to discover and intercept these problems. Various impressioning techniques for edentulous, partially edentulous, and implant patients will be discussed and demonstrated. A predictable method of accurately recording the patient’s centric relation and desired tooth placement (without conventional wax rims!) will be shown in detail. Additionally, overcoming some of the most common problems with implant overdentures and laboratory communications will be addressed.

COURSE OBJECTIVES:
• Review simplified and practical concepts in Removable Prosthodontics of the past and today, as well as define the advantages and disadvantages of each.
• Discuss various problems commonly associated with edentulous patients, as well as methods to intercept these problems before committing to patient treatment.
• Learn how to evaluate and condition the edentulous tissues for impressioning, as well as a method for evaluating soft-tissue displacement.
• Enhance lab communications related to removable prostheses.

Dr. Joseph Thornton maintains a private dental practice focused on removable and implant prosthetics in suburban Atlanta. A graduate of Emory University School of Dentistry, Dr. Thornton furthered his education at the L.D. Pankey Institute, completing the six-part continuum in 2000. He has returned to the Pankey Institute as a visiting faculty member in the Complete Denture course. Dr. Thornton is one of the founding faculty members of the Massad Center for Higher Learning in Tulsa, Oklahoma, and he has lectured on the subject of removable prosthetics throughout the country. He is a fellow of the Academy of General Dentistry and the Academy for Dental-Facial Esthetics.
