Restoratively Driven Esthetic Implant Dentistry

Presented by Dr. Matthew Hopsfenperger
Thursday, October 13, 2016 | Madison, WI

Co-sponsored by
Restoratively Driven Esthetic Implant Dentistry

With the advances and evolution occurring in implant dentistry, it is imperative that we provide the most esthetic restorative and surgical option for our patients. There are a multitude of dental implant systems available to the surgeon and restorative dentist, each with its own advantages. We must be able to rationally evaluate these systems to logically justify their use in a specific case. This program is designed for the experienced as well as the emerging implant dentist. There will be an overview of treatment planning parameters and a review of surgical protocols, including site preservation, immediate placement and augmentation. The proper utilization of immediate provisionalization and loading will be addressed. The emphasis of this program will be on understanding the advantages of dental implant systems and restorative options available. Implant dentistry is now, more than ever a team approach. The synergy of the restorative dentist, surgeon and dental laboratory is of utmost importance. Dr. Hop will also touch upon the latest state-of-the-art patient-specific overdenture solutions and how they are gaining popularity. The concept uses rigid telescopic principles to give your patients a pure implant-borne, palate free, removable result that is easy to clean.

At the completion of this course, participants will be able to:

- Understand the workflow to successfully restore your edentulous patient
- Understand customization of implant-level impressions
- Integrate patient-specific abutments into any implant protocol
- Learn the easiest and most innovative way to restore implants via a CAD/CAM custom complete system
- Understand the benefits of implant-supported, patient-specific restorative options for fully edentulous situations
